

TRANSPORTATION

SETUP WITH GROUPTALK

Unforeseen events and incidents happen in all businesses, but within transportation the consequences can be fatal. Traffic accidents or a broken down vehicle demands rapid communication and therefore a personal alarm with positioning is critical.

CHALLENGE

A dispatcher typically distribute work orders to vehicles and mobile workers in text form (in apps, SMS or e-mail) to smartphones or PDAs. However, for a mobile worker on the run, "voice" is still the safest, quickest and often best way to communicate back to the dispatcher or within a group. The possibility of reaching the fleet of vehicles in groups or individually is important in many situations. On the positive side a change of plans or request for resources often indicates increased revenue for the transportation company. On the flip-side, transportation is an industry exposed to a number of dangerous situations and safety must always be a top priority, even when a transport need to be rerouted on the fly.

✓ SOLUTION

A radio communication solution without range limitations, good sound quality and with the option to send an alarm to a dispatcher and/or colleagues on the road is the ideal tool. GroupTalk PTT with personal alarm and positioning is a perfect fit for this customer segment. Not to forget the social aspect of being able to talk in a group with colleagues on the road using voice.
